

Inquiry 1
15:255:603
3 Credits

Tuesdays 4:50-7:30pm
Scott Hall Room 102

Instructors: Sharon Ryan Steve Barnett	sharon.ryan@gse.rutgers.edu sbarnett@nieer.org
Phone Number (848) 932-0808 (848) 932-4350 x23132	10 Seminary Pl Rm 239 73 Easton Ave
Office Hours: by appointment	Prerequisites or other limitations: A student must be admitted to the EdD program
Mode of Instruction: <input type="checkbox"/> Lecture <input checked="" type="checkbox"/> Seminar <input type="checkbox"/> Hybrid <input type="checkbox"/> Online <input type="checkbox"/> Other	Permission required: <input type="checkbox"/> No <input checked="" type="checkbox"/> Yes Directions about where to get permission numbers: from the instructor

Rutgers University welcomes students with disabilities into all of the University's educational programs. In order to receive consideration for reasonable accommodations, a student with a disability must contact the appropriate disability services office at the campus where you are officially enrolled, participate in an intake interview, and provide documentations: <https://ods.rutgers.edu/students/documentation-guidelines>. If the documentation supports your request for reasonable accommodations, your campus's disability services office will provide you with a Letter of Accommodations. Please share this letter with your instructors and discuss the accommodations with them as early in your courses as possible. To begin this process, please complete the Registration form on the ODS web site at: <https://ods.rutgers.edu/students/registration-form>.

Learning Goals

The goal of the Rutgers Ed.D. program is to create educational leaders who are agents of change. Inquiry 1 specifically addresses the Ed.D. program goal of helping students to produce and use research efficiently and effectively to solve problems of practice.

To achieve this goal, students will:

- Learn to find, evaluate, summarize, and apply the research literature relevant to a problem of practice.
- Identify a problem of practice and pose researchable questions that address this problem.
- Situate the problem of practice in relation to relevant research literature.
- Outline a plan for collecting data with a suitable sample to answer the research questions and know how to use the procedures outlined.
- Design and use different data collection tools.
- Explain what makes for a quality study of a problem of practice
- Continue to refine their academic writing skills in relation to designing research studies to answer problems of practice.

Course Catalogue Description

The purpose of this class is to help students gain an understanding of the design components that go into any inquiry including the capstone/dissertation project they will be completing in this program. A second purpose is to expose students to the range of inquiry tools that they can use to solve problems of practice and to provide opportunities for them to practice and test out some of these tools. In doing so, students will learn that tools like observation and interviewing can be both qualitative and quantitative and choosing how much structure to use depends on the problem being studied.

Other Description of Course Purposes, Context, Methods

This class is the first of two inquiry classes in the Ed.D. core and provides an introduction to research design and the various methodologies (quantitative and qualitative) that can be used by change agents to investigate problems of practice. The second inquiry class centers on the process of implementing research in sites of practice and how to analyze and communicate findings to a range of stakeholders.

Course Assignments and Grading

Grading and Assignments

Your course final grade will be based on

Activity	Total points
Attendance, participation	15 points
IRB certification	5 points
Designing and collecting interview/survey task	30 points
Research Plan	<u>50 points</u>
	100 points

Class participation (15%)

Class participation is crucial to your understanding and application of course content. You are expected to come to class prepared to discuss assigned readings and to participate in class activities. You will be graded on your individual contributions. We understand that you are busy professionals but encourage you to try and attend every class session. If you must miss a class please make sure that you talk to a fellow student or reach out to one of us to help you catch up on what was discussed in your absence. If you miss more than one class during the semester without a bona fide reason your grade for the course will automatically be reduced by 2 points per class.

IRB Certification (5%)

All students are expected to go online to the Office of Research and Sponsored Programs on the Rutgers Website and follow the procedures for human subjects certification. After reviewing the procedures, the link for the certification test is: <https://sakai.rutgers.edu/portal/site/600c1140-3890-4274-00ca-dd17d37107ba#>.

Certification is expected by week 5 of this class. Proof of passing the human subjects certification test (i.e., the letter you will receive) should be uploaded into assignments by **September 30, 2014**.

Interview/Surveying Data Collection and Reflection Paper (30%)

This assignment provides an opportunity for you to practice designing interview and survey protocols and to test them out with a sample. Working together we will develop a set of research questions to examine student perceptions' and behaviors when evaluating courses in their programs at Rutgers. We will then design some survey and interview questions to answer our research questions. Inquiry I students will administer the survey and conduct qualitative interviews with a small group of Rutgers students.

At the conclusion of data collection students are to write up a report on: a) the purposes of the study, b) the sample, c) the methodology employed (processes involved in conducting the interviews), d) critical reflections on the method and the way it was employed, e) references, and f) an appendix that includes field notes taken at the time of data collection and any raw data. Your report should be no longer than 10 pages excluding the appendix.

The reflective piece should include what you learned about methodology and what you would do differently (i.e. sampling design, design of interview questions, procedures of data collection) to ensure the data set was more helpful in answering the research questions. Explicitly use (and cite) the class readings and lectures in your reflections and We will work on aspects of this assignment in class and use the data collected for our work on data analysis and communicating research findings in the spring as part of Inquiry 2.

Interview/surveying data collection and reflection paper due week 13, 12/2/2014

Research Plan (50%)

This is the main assignment for the class and it is divided up into mini-assignments to be completed periodically throughout the class so that you receive timely and useful feedback. You will submit a more complete and sophisticated version at the culmination of Inquiry 2 so choose your problem wisely.

Over the course of the class you will draft a research plan of 30 pages or less to investigate a problem of practice in your workplace. A problem of practice research plan describes a challenge in educational practice, seeks empirically to investigate the challenge and/or test solution(s) to address the challenge. According to the Carnegie Project on the Education Doctorate (2014), a problem of practice is “a persistent, contextualized, and specific issue embedded in the work of a professional practitioner, the addressing of which has the potential to result in improved understanding, experience, and outcomes.”¹

Research plans that investigate or test solutions to a challenge in educational practice typically formulate research questions that in some way ask “What’s going on here?” or “What happens when I, we, or they do...?” Your research plan will include the following sections:

A. Problem Statement and Research Questions

- State the purpose of your study by describing the problem in relation to research literature and the context in which you work to show why it is a problem that needs to be addressed.
- Identify the research questions that will guide your study. Research questions should reflect the methodological orientation you are using. Qualitative research questions are

¹ Carnegie Project on the Education Doctorate (2014). Design concept definitions. Retrieved from <http://cpedinitiative.org/design-concept-definitions>

- usually stated as what or how questions, quantitative questions tend to be stated as hypotheses. Mixed methods will have a blend of question types.
- Make sure to operationalize or define any constructs/variables

B. Literature Review

- Write your review as a survey and synthesis of relevant literature (at least 25 empirical studies) informing your problem. It should be clear how all of the studies you identify for review are connected to the question or topic addressed in your problem statement.
- Include as your “methods section” a clear and replicable “recipe” consisting of the procedures you followed to identify the literature including search engines used, key words, types of resources searched, and criteria for inclusion and exclusion.
- Group the studies into categories.
- Describe each theme or sub group of studies that synthesizes the information they provide. This description should look across studies not just list them and consider the theoretical perspectives and empirical methodologies employed, strengths and weaknesses, findings, agreements and disagreements, and implications for your study.
- Provide a concluding section that summarizes what the research as a whole leads you to believe about where there is agreement and disagreement around your problem of practice. What are the strengths and weaknesses of the literature as whole? How does the literature inform your study?

C. Theoretical Framework

- Explain the theoretical framework that guides your study. This theory may be a formal theory like Vygotsky’s theory of human development or it may be a blending of concepts and theories that you put together to help frame how you are theorizing the problem. Often the theoretical framework comes from one or more prior studies that provide the springboard for your proposed study. The key assumptions underpinning your theory and the relations between these key assumptions should be explained. This theory helps tease apart the many different variables and/or factors related to the problem and inform the methodology to be used.

D. Methodology

- **Research Design.** Specify the research design including a justification and overview of the methods you will use to evaluate the process and outcomes of this program. How does your design reflect the goals or purposes of your study?

Quantitative: What is the counterfactual and how do you measure it—in other words: how do you know what would have happened without the program, policy or practice? What would have happened to the “treatment” group without the treatment and what would their outcomes have been in that circumstance? In an experiment, the counterfactual is provided by a control group. In a quasi-experiment, statistical controls or other adjustments are used to try to adjust a comparison group so that it approximates the counterfactual. Therefore, it is

important to make it clear whether you are proposing an experiment or quasi-experiment. In addition, is important to report whether you will have a pre-test and post-test and whether you will measure implementation, outcomes, or both.

Qualitative: Are you conducting a case study, an action research project, an interview study? What kind of qualitative design is best suited to your research questions. If your aim is to describe more of what is going on then a case study might be the design you choose. If you want to engage in a cycle of inquiry around an intervention then an action research design might be more useful. If you are the practitioner studying the implementation of a program in your own site of practice you might say you are conducting a practitioner inquiry using qualitative procedures.

Mixed Methods: Concurrent, sequential? What weight is to be given to quantitative and qualitative procedures and how does this weighting link to your research questions and purposes.

Remember to link the design to your research purposes.

- **Sampling strategy, sample selection and recruitment.** How and why will you select your participants and secure their participation? What criteria will you use?

Quantitative: How large is the sample? Who is in the sample? How will they be recruited? What are your sampling procedures (a random sample of the population or a purposeful sample)? What will you do to minimize attrition and report the results?

Qualitative: Who and what (sites, classrooms, programs) will you purposefully sample, specify criteria guiding these decisions and show how these criteria link to your research purposes. How will you recruit these people and sites?

All sampling decisions need to be justified in terms of usefulness (including ability to generalize to the population of interest).

- **A detailed description of the data collection procedures.** How will you collect your data? Describe your procedures in sufficient detail that someone else can follow your recipe. Pilot testing is always a good idea.

Quantitative: What measures will be used and how will they be administered? What can you say about reliability and validity? What specific instruments will you use to collect the data (pre-existing or newly created interviews, surveys, rating scales, or tests that you will use)? Pilot test any measures that are new or have not been used locally. How will you ensure confidentiality if that is important? Are there risks to the participants, and, if so, how will you minimize them?

Qualitative: What kinds of interviews (focus group, individual, semi-structured, conversational), observation, documents will you collect - what, why, how, when, who, and how do these procedures help you achieve the goals/purposes of the research.

Throughout your discussion of methodology please reference methodological literature to support your decisions.

The research plan is to be crafted as you proceed through the class so that you can receive feedback before proceeding onto the next section therefore the following pieces of this research plan will be due to the professors at the end of each week.

- Week 4 (10%) - Problem statement, research questions and hypotheses (if applicable)
- Week 7 (10%) - Organized bibliography and outline of literature review
- Week 11 (10%) - Draft of design, sample and data collection
- Week 15 (20%) - Complete, revised research plan that includes a full literature review

Research plan due December 16, 2014

Evaluation of Written Work

The following qualities will be valued in your work.

- Responsiveness to the task or question. Make sure that you fulfill *all* the requirements of the assignment.
- Clarity and organization of writing.
- Conciseness. Write in an organized and non-repetitious way.
- Completeness and depth. Present enough detail to support your points. Write or present as though your audience is not an expert on your topic, and in a way that demonstrates depth of your analysis of the topic.
- Independent judgment. Go beyond simply repeating information presented by others. Be critical. Identify both strengths and weaknesses and support opinions regarding these by stating your own reasons.
- Relevance. Connections between your work and the content and organization of this class should be clear.
- Attention to professional style. Papers must be typed or word-processed and strictly follow APA format.
- Timeliness. All work is due on the due date. If you need an extension of time on an assignment, please contact one of us in advance of the due date to discuss a possible extension.
- All assignments are to be submitted in the assignments section of the SAKAI site.

Letter Grade Equivalents

93-100	A
88-92	B+
83-87	B
78-82	C+
73-77	C
68-72	D+
60-67	D
Below 60	F

Academic Integrity Policy

- All students must follow the RU Code of Student Conduct which can be accessed at:
<http://rci.rutgers.edu/%7Epolcomp/judaff/ucsc.shtml>
- For information on the academic integrity policy, please go to:
<http://www.rci.rutgers.edu/~polcomp/integrity/policy.shtml>
- A multimedia presentation on plagiarism can be found at:
<http://www.rci.rutgers.edu/~polcomp/integrity/realifeexamples.html>

Related regulations may also be found in the Rutgers Graduate School of Education Catalog

Important Note: This syllabus, along with course assignments and due dates, are subject to change. It is the student's responsibility to check Sakai for corrections or updates to the syllabus. Any changes will be clearly noted in course announcement or through Sakai email.

Topic Outline/Schedule & Assignments

Class	Date	Topic	Readings	Activities/ Assignments
1	9/2/2014	<p>What is educational research and how can it be used to improve practice? Why do educational leaders need to use research?</p> <p>Differing orientations to educational research: Qualitative & Quantitative approaches.</p> <p>Class overview.</p>		<p>Begin considering the problem of practice you would like to address.</p>
2	9/9/14	<p>Conceptualizing a Study:</p> <ul style="list-style-type: none"> • Naming & framing problems; • Asking questions; • Coming up with testable hypotheses. <p>Ethics</p>	<p>Read: Creswell Ch. 1, 5, 6, & 7.</p> <p>Skim: Cook et al., Grant et al., & Horn & Little.</p>	<p>Review qualitative quantitative and mixed methods study examples. How do the authors conceptualize the study, what kinds of literature do they draw upon, what are the questions asked. How do they collect and analyze data. What makes you believe them?</p>
3	9/16/14	<p>Conceptualizing a study pt. 2 - using the literature to frame a problem of practice:</p> <ul style="list-style-type: none"> • what to include; • how to review and analyze a study. 	<p>Creswell Ch. 2.</p>	<p>Review qualitative quantitative and mixed methods study examples. What do they include in the literature review, how is the literature presented?</p> <p>Playing around with literature.</p> <p>Bring to class a draft of your problem statement, research questions etc. for peer review</p>

4	9/23/14	Literature reviews: What's the evidence? Learning how to read studies critically.	Carefully read: Cook et al., Grant et al., & Horn & Little.	Draft of problem statement, research questions/hypotheses due.
5	9/30/14	Conceptualizing a study part 3: Where does theory fit into all of this?	Read: Creswell Ch. 3.	Ed.D. graduate guest speaker. IRB human subjects certification should be completed.
6	10/7/14	What is research design? Different designs, for different purposes. Reliability and validity.	Read: Creswell Ch. 4, Merriam Ch. 9 Dealing with validity, reliability, and ethics.	
7	10/14/14	Sampling. How do you represent a population?	Read: An introduction to sampling.	Organized bibliography and outline of literature review due.
8	10/21/14	Sampling Part 2. Sampling for maximum variation. Mixed methods sampling		Coming up with a sampling plan for the interview/survey assignment.
9	10/28/14	Data collection procedures Part 1: Surveying and Interviewing.	Read: Creswell Ch. 8, 9, 10.	Designing a survey protocol.
10	11/4/14	Surveying/Interviewing. Qualitative interviewing.	Read: Walonick (2004) & Patton (2002).	Designing a qualitative interview protocol.
11	11/11/14	Data collection procedures Part 2. Existing data sets. Documents and artifacts.	Read: Merriam Ch. 7. Mining data from documents.	Draft of design, sample and data collection procedures is due.
12	11/18/14	Data collection procedures Part 3: Observation	Read: Cohen, Manion, & Morrison. (2007). Observation.	Carry out observation.
13	12/2/14	Observation revisited. Reflecting on data collection.		Interview/survey data collection & reflection paper is due.
14	12/9/14	Working on your research plans: situating methods and procedures in the literature.	Read: Lemons et al. (2014).	

		What is your conceptual model derived from the literature?	Revisit fundamental issues of design.	
15	12/16/14	Putting it all together. Presentation of research plans so far. Looking forward to Inquiry 2		Final research plans due
