

**Rutgers, The State University of New Jersey  
Design of Learning Environments**

15:262:603:01 3 Credits  
Mon 7:30-10:10 Room 211

Instructor Name: Ravit Golan Duncan	Email address ravit.duncan@gse.rutgers.edu
Phone Number ( 848) 932 0792	10 Seminar Pl Rm 222
Office Hours: by arrangement	Prerequisites or other limitations: NA
Mode of Instruction: <sup>1</sup> <input type="checkbox"/> Lecture <input type="checkbox"/> Seminar <input type="checkbox"/> Hybrid <input type="checkbox"/> Online <input checked="" type="checkbox"/> Other	Permission required: <input checked="" type="checkbox"/> No <input type="checkbox"/> Yes Directions about where to get permission numbers:

Rutgers University welcomes students with disabilities into all of the University's educational programs. In order to receive consideration for reasonable accommodations, a student with a disability must contact the appropriate disability services office at the campus where you are officially enrolled, participate in an intake interview, and provide documentations: <https://ods.rutgers.edu/students/documentation-guidelines>. If the documentation supports your request for reasonable accommodations, your campus's disability services office will provide you with a Letter of Accommodations. Please share this letter with your instructors and discuss the accommodations with them as early in your courses as possible. To begin this process, please complete the Registration form on the ODS web site at: <https://ods.rutgers.edu/students/registration-form>.

Academic Integrity Policy Any violation of academic honesty is a serious offense and is therefore subject to an appropriate penalty. Refer to <http://academicintegrity.rutgers.edu/integrity.shtml> for a full explanation of policies.

**LEARNING GOALS**

- Students will be able to describe the design process (needs analysis, design, user testing)
- Students will be able to apply this process to the design of a learning environment of their choice
  - Students will conduct and report on their needs analyses for the design
  - Students will develop the designed product in multiple stages
  - Students will conduct and report on their user testing for the design
- Students will be able to describe several useful design frameworks in the field

---

## **COURSE CATALOG DESCRIPTION:**

Learning environments are the diverse settings in which people (children and adults) develop new ways of thinking, acting, and being in the world. A learning environment can be as simple as a mother teacher her infant to build a tower of blocks, or as complex as a flight simulator. Learning environments can include formal settings such as a science classroom, or a professional development workshop for teachers; or informal settings such as an after-school science club or a museum display. Many learning environments include technology to support and facilitate learning. In all these environments people can develop new knowledge about a topic, develop new ways of doing a task (selling, cooking), or learn new ways of engaging with others (learn cultural norms). These environments interact with the learners' cultural background, prior knowledge, interests, and identity. The design of any learning environment must begin with a consideration of the learner's needs. In this regard there must be some consideration of the social context in which the learning is to occur and the physical setting.

This course is an introduction to the process of planning, designing, and user testing of learning environments in formal and informal settings. In this course we will focus on both the theoretical and practical aspects of design. Towards this end students will work in small groups to design a *simple* learning environment of their choice. The process of design will be guided by various design frameworks, and informed by current research on the design and study of learning environments. The goal is not to build a functional LE but rather to build some simple LE that will allow you to engage with and experience the design process, which is the focus of this course. The course is divided into three stages that reflect the design process:

- Needs analysis: what is the target audience for the design and what needs does it address, what are the design goals and constraints
- Design: within the design space choosing among alternative designs, identifying the tradeoff space, and making informed design decisions
- User testing and revision: small scale testing of elements of the designed product

The course is a hybrid of mostly in-class session with a few on-line sessions. The course includes multiple assignments, most of which will be carried out in groups.

## **Course Structure and Assignments**

Readings and discussion: There will be assigned readings for most class sessions; you are expected to read them and be prepared to discuss them in class. On occasion an additional reading may be assigned or a new reading may be substituted.

Student pairs will be expected to take turns facilitating the online and in-class discussions of the readings in class. These activities count towards your participation grade.

Participation: Your participation in class and online counts towards your grade. It is therefore important that you actively participate in class activities and discussions. Learning is an active process: the more you participate the more you learn.

Discussion board: Each student is expected to contribute weekly to the online discussion board. Weekly guiding questions will be posted by the instructor by Thurs @ 5pm. All students are expected to contribute no later than the following Sun at 5pm. Entries should be substantive and may be in response to the guiding question, or in response to another student's post question (new post are allowed as well but they must take into account existing comments). This discussion board will serve several purposes: (1) a to think

about and discuss your design project, (2) a place to respond to various questions posted by the instructor and students, (3) a place to reflect about what you are learning about design (both things you understand and things you are confused about). Participation in discussions counts towards your participation grade.

Course project: As noted above this course is organized around the development of a learning environment. The design work will be conducted in small groups and will take place both during class and on-line between classes. The design process will progress in stages and there will be graded and non-graded assignments associated with these stages, including presentation of artifacts from various stages of the design. The following is a brief description of each stage and the relevant assignment/s:

*Needs/Task analysis:* Each group will conduct a needs analysis that includes the identification of the target audience and their needs. This will be done through observations, surveys, and interviews with members of the target audience. The needs analysis will also include a description of the design goals and constraints.

*Developing the storyboard:* Using the design frameworks each group will develop a storyboard for how the learning environment will function. What are the tasks that learners will perform and with what support? How will the learning process unfold? What are the various options and functionality involved? Groups need to provide documentation of the rationale for key design decisions and describe the tradeoffs involved in these decisions.

*Designing a prototype of the environment:* Each group will develop a prototype for the environment with most of its functionality. Documentation of design decisions is also part of this assignment. Prototypes will be presented to the class.

*User testing of prototype:* Each group will conduct user testing of the prototype with either individual users or focus groups. Groups will prepare a report based on the testing and will suggest revisions to the design. Note even if your design fails to meet your goals, all is not lost, you have still learned a lot from the experience itself- and that is my goal for you.

Informal learning environment report: Individually or in pairs you will visit, on your own time an informal learning environment of your choice such as a museum, after school academic club, science center, etc. (pending approval of instructor). You will spend at least 2 hours at the location viewing the interaction of visitors with the environment. You will then focus on 1-2 aspects of the environment to analyze in depth and critique. You will write an individual report about your visit and analysis.

Individual reflection paper: The last assignment of this course is an individual reflection paper about 5 pages long in which you reflect on what you have learned in this course. This reflection should be based on the contribution of the readings, class activities, and final project to your developing understanding of the design of effective learning environments.

## Grading:

Assignment	Date due	Grade
Participation (individual)	Throughout course	30%
Needs Analysis (group)	Week 4	5%
Storyboard (group)	Week 7	5%
Prototype (group)	Week 10	5%
Critique of Informal LE (individual/pair)	Week 13	20%
User Test Report (group)	Week 14	15%
Individual reflection paper (individual)	Week 14	20%

## ***Syllabus:***

### Week 1- Introduction

Travis, D. (2009). The fable of the user-centered-designer. Userfocus.  
Introduction to the design of LEs, discussion of course plan and requirements  
*Proposal for 3 development ideas due (~1 page per idea) Sep 12 @ 8pm, be prepared to describe and discuss each idea.*

### Week 2- Needs Analysis I: Plan the needs analysis

Norman- Design of Everyday things chapters 1-3

*Present alternative proposals*

### Week 3- Needs Analysis II: Conduct needs analysis **(on-line)**

Handbook of the LS: Chapter 8- Learner Centered Design

Norman Design of Everyday Things Chapter 7 (skim 4)

### Week 4- Storyboard I: Storyboarding (in class)

Quintana, C., Reiser, B. J., Davis, E. A., Krajcik, J., Golan, R., Kyza, E. A., et al. (2004). Evolving a scaffolding design framework for designing educational software. *Journal of the Learning Sciences*, 13(3), 337-386.

Edelson, D. C. (2001). Learning-for-Use: A Framework for the Design of Technology-Supported Inquiry Activities. *Journal of Research in Science Teaching*, 38 (3), p355-85

### Week 5- Storyboard II: Create storyboard **(online)**

Handbook of the LS Chapter 20: Making Authentic Practices Accessible to Learners

### Week 6- Storyboard III: Present storyboard (in class)

Handbook of the LS Chapter 4: Cognitive apprenticeship

*Present storyboard (20 min per group)*

## Week 7 - Prototype I: Prototyping (in class)

Handbook of the LS- Chapter 28: Motivation and Cognitive Engagement in LE

Another reading TBD

Guest speaker: Motivation (tentative)

## Week 8 - Prototype II: Create prototype (on line)

Edelson, D. C. (2002). Design research: What we learn when we engage in design. *Journal of the Learning Sciences*, 11(1),105-121

## Week 9 - Prototype III: Present prototype (in class)

Allen, S. (2004). Designs for learning: Studying science museum exhibits that do more than entertain. *Science Education*, 88, 17-33.

## Week 10 -Prototype IV: Revise Prototype and Informal Learning Environment Visit (online)

Matthews, T., Whittaker, S., Moran, T., & Yuen, S. (2011). Collaboration personas: a new approach to designing workplace collaboration tools. *Proceedings of the Annual Conference on Human Factors in Computing Systems*, Vancouver, BC.

## Week 11 - User test I: Develop User test (in class)

Bielaczyc, K. & Collins, A. M. (1999). Learning communities in classrooms: A reconceptualization of educational practice. In Reigeluth, C. M. (Ed), *Instructional-design Theories and Models: A New Paradigm of Instructional Theory* : 269-292.

Another reading TBD

User Testing methodologies: <https://www.msu.edu/~thorpjus/w3cwai/ucdres.html>

## Week 12 - User Testing- (online)

Kanter, D.E. (2010). Doing the project and learning the content: Designing project-based science curricula for meaningful understanding. *Science Education*, 94(3), 525-51.

## Week 13 -Gaming in Education

Ge, J. P. (2005). "Learning by Design: good video games as learning machines". *E-Learning, Volume 2* (Number 1), p. 5-16

Barab, S. A., Gresalfi, M., & Arici, A. (2009). Why educators should care about games. *Educational Leadership*, 67 (1), 76-80.

Kafai, Y. B. (2006). Playing and making games for learning: Instructionist and constructionist perspectives for game studies. *Games and Culture*, 1(1), 36-40.

Guest Speaker: Tentative

## Week 14-15 Design Fair (in class)

*User testing presentation Due in class*

*Groups will present their designs, results of user testing and revisions*

*Individual reflection paper due*

No Readings
